## Staten Island Unbottling

IN OPERATION

**Staten Island Unbottling** is one of three electric power bulk transmission projects developed and owned by New York Transco (Transco) from the Transmission Owner Transmission Solutions (TOTS).

### Description:

- Split an existing 2.3-mile 345 kV line into two transmission lines between the existing Goethals Substation and the existing Linden Cogeneration Substation
- Construction at both substations to relocate feeder terminals connections and relay modifications

**Location:** Staten Island, NY and Linden, NJ

**Purpose:** To address upstate to downstate New York transmission congestion issues, reduce costs for customers, and contribute to system reliability due to generator retirements.

**Status:** The Project was energized on-schedule in April and May 2016.

### Benefits:

- Increased transmission capability and reliability
- Addition of system redundancy and generation supply to New York
- Minimal local and environmental impacts by upgrading existing infrastructure on existing utility transmission corridors and property

Transmission line workers conduct efforts to safely construct the work near the Goethals Substation in Staten Island, NY

### About Transco

*New York Transco (Transco) is a New York-based, New York-focused developer, owner and operator of electric transmission solutions and facilities that serve customers in New York.*
